Turning Bugesera youth into agri-interpreneurs

Youth Agribusiness Training & Incubation Program

Mission

Our mission is to reduce youth unemployment in Bugesera by equipping young people with practical agricultural, entrepreneurship, and market-ready skills that turn learning into livelihoods.

$10,000 ask

Pilot funding to train, incubate and launch youth-led agribusinesses.

PROBLEM STATEMENT

Bugesera has the right sector — but not enough job-ready youth

Our mission

Transform theory into practical agricultural skills so young people can move from education to employment.

14.5%
Unemployment
Bugesera, 2024

30.5%
Inactivity
Bugesera, 2024

59.4%
Crop farming HHs
Bugesera, 2022

Problem

Formal education often leaves graduates with academic knowledge but limited applied farming, business and market skills. That mismatch keeps youth unemployed or inactive while Bugesera remains deeply agricultural.

Investor takeaway

Bugesera already has the economic base for youth livelihoods through agriculture. What is missing is an applied pathway from learning to earning.

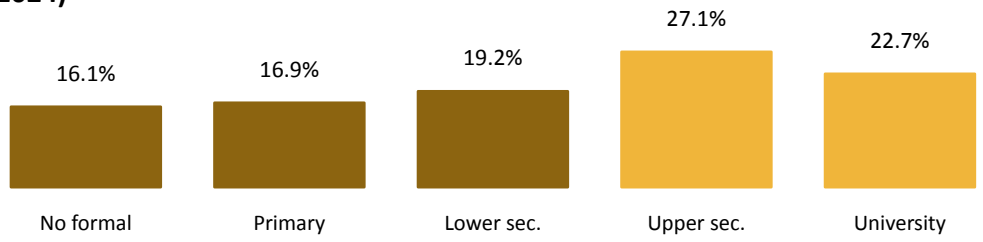
RESEARCH ANALYSIS

The gap is not interest — it is practical readiness

What our research points to

- Agriculture is often taught theoretically, with limited exposure to irrigation, crop management, record keeping and market planning.
- Youth who want to farm often lack starter resources, mentorship and the business skills to manage a profitable enterprise.
- This weak transition from education to the labor market helps explain why educated youth can still struggle to secure work.

Youth unemployment by educational attainment (2024)



Field validation

Our field observations and an interview with AgriWIN reinforced the need for practical agribusiness training instead of theory alone.

SOLUTION STATEMENT

Our solution is a practical pipeline from training to income

01
Train

Hands-on learning in crop management, irrigation, soil health, post-harvest handling and conservation agriculture.

02
Incubate

Support agriculture scholars who has impactful ideas to come to life

03
Link

Connections to mentors, demonstration farms, buyers and local markets so graduates can earn, not just learn.

Partnership advantage

RICA combines classroom learning with field-based practice and internships. B2R Farms trains young agriculture professionals through practical conservation agriculture models. We will leverage these ecosystems to deliver a low-cost, high-practicality pilot in Bugesera.

EXECUTION PLAN

How the pilot will work in year one

1

Recruit

Select 30 youth aged 16–35 and assess needs.

2

Train

Run practical modules with field demos and partner sessions.

3

Incubate

Support top ideas with starter kits and business coaching.

4

Launch

Host demo day, market linkages and follow-up support.

The grant activates a pilot, not a heavy infrastructure project. We will prioritize direct learning costs and participant support.

Pilot design

30

Youth trained

Direct beneficiaries

10

Ventures supported

Starter kits + coaching

12

Months

Recruit to follow-up

BUDGET

Exactly how we will use the $10,000

Allocation bar

$10,000 total grant request

The budget avoids large infrastructure costs and concentrates spending on direct participant value, practical training and venture launch support.

$333
Cost per trainee
Based on 30 trainees

$1,000
Cost per venture
Based on 10 ventures

Training materials & demo plots	$2,700
Starter kits for youth ventures	$2,300
Technical trainers & mentorship	$1,800
Business incubation & market linkage	$1,400
Monitoring, evaluation & learning	$900
Transport, coordination & communications	$900

IMPACT

What success looks like after the first 12 months

30 youth complete hands-on agribusiness training

10 ventures or income pathways incubated

70% participants placed, self-employed or earning within 6 months

40% target increase in average agriculture income among active graduates

WHY US

Why our team deserves the grant

01 Grounded in Bugesera's reality

We start from the district's actual labor and agriculture profile — not a generic youth project.

02 Built on evidence

Our proposal combines official data with field observation to focus on the real bottleneck: practical skills and market readiness.

03 De-risked through partnerships

By aligning with institutions such as RICA and B2R Farms, we avoid reinventing methods and focus on delivery.

04 Designed for accountability

The model is measurable, budget-disciplined and pilot-sized, making value created per dollar easier to track.

We are not asking investors to fund an idea in isolation — we are asking them to back a practical bridge from education to employment.

A $10,000 grant can turn underused talent into productive livelihoods in Bugesera.

We are ready to pilot, measure and prove that practical agribusiness training can move youth from theory to income.

Our ask

Fund one pilot cohort, launch 10 youth-led income pathways, and help build a scalable model for Bugesera.

Thank you
